## IMPORTANT INFORMATION

Manager of the Funds: Manulife Investment Management (Singapore) Pte. Ltd. ("Manulife") (Company Registration Number: 200709952G)

The information provided herein does not constitute financial advice, an offer or recommendation with respect to the Funds.

Opinions, forecasts and estimates on the economy, financial markets or economic trends of the markets mentioned herein are not necessarily indicative of the future or likely performance of the Funds. **The Funds may use financial derivative instruments for efficient portfolio management and/or hedging.**

Investments in the Funds are not deposits in, guaranteed or insured by the Manager and involve risks. Past performance of the manager or sub-manager is not necessarily indicative of their future performance. The value of units in the Funds and any income accruing to them may fall or rise. Past performance of the Funds are not necessarily indicative of future performance. Investors should read the prospectus, and seek advice from a financial adviser before deciding whether to purchase units in the Funds. A copy of the prospectus and the product highlights sheets can be obtained from Manulife or its distributors. In the event an investor chooses not to seek advice from a financial adviser, he should consider whether the Funds are suitable for him.

**Distributions are not guaranteed.** Investors should refer to the prospectus for the distribution policy of the Funds. The Manager shall have the absolute discretion to determine whether a distribution is to be made in respect of the Funds as well as the rate and frequency of distributions to be made. Distributions may be made out of (a) income, or (b) net realised gains, or (c) capital of the Funds, or (d) gross income while charging all or part of the fees and expenses to capital, or (e) any combination of (a), (b), (c) and/or (d). Past distribution yields and payments are not necessarily indicative of future distribution yields and payments. Any payment of distributions by the Funds is expected to result in an immediate decrease in the net asset value per unit of the Funds.

### Manulife Singapore Bond Fund (the "Fund")

#### Market Review<sup>1</sup>

The first half of 2024 saw further volatility in markets as investors recalibrated their expectations for the path of monetary policy amidst a global economy that has held up better than expected over the first half of the year, as well as elevated geopolitical tensions and a mixed inflationary environment. Central banks broadly continued to emphasize data dependency, with officials mostly maintaining their steadfast stances on tight policy rates. The backdrop for risk assets remained strong, with resilient economic data providing support and lending further credibility to the soft-landing narrative. Both US Treasury and SGD-denominated sovereign yields repriced higher in the first half of the year from the end of last year, across steeper curves.

The US Federal Reserve (Fed) made no changes to its fed funds rate, leaving it in the range of 5.25% to 5.50% over the first half of the year. Fed Chairman Jerome Powell indicated numerous times that it would be appropriate for them to "begin dialing back policy restraint at some point this year", but also reiterated that the Fed is unlikely to begin easing policy until they are confident that inflation is trending "sustainably towards 2.0%". In their latest June meeting, the Fed continued to maintain their data dependency stance, preferring to wait for further data validating the decelerating trend of inflation. The Federal Open Market Committee's (FOMC) interest rate projection, however, showed a reduction in the median number of cuts this year to just one, complicating the outlook for interest rates.

Singapore's economy remained largely resilient over the first half, with first quarter gross domestic product (GDP) figures painting a rosier picture with growth at 2.7% on a year-on-year basis. There were still lingering worries, particularly in the externally oriented sectors, as international trade continued on its sluggish path. The latest non-oil domestic exports (NODX) growth for May 2024 was still in contractionary territory, printing -0.1% year-on-year, extending the broad trade weakness since the start of the year. Core inflation in Singapore remained sticky, with the latest May 2024 figure at 3.1% year-on-year. The preceding months also saw similar prints, as sticky services inflation, supported by a tight labour market, domestically kept this figure elevated over the first half of the year. The Monetary Authority of Singapore (MAS) still expects core inflation to remain elevated for the most part of 2024 but to see a slowdown in the last quarter and into 2025, with current inflation on track with their forecast.

SGD-denominated and Asian USD-denominated credit spreads ended the period tighter yet again, as risk assets were supported by the continuation of resilient economic data and with investors still having cash to deploy across the region. The geopolitical tensions and uncertainties in the first half of the year largely did not meaningfully impact the prevailing positive sentiment over risk assets. Further concrete measures announced by the Chinese government to aid the economy also lent some support to the Goldilocks theme. Global equities were also higher across the period, with the larger cap growth stocks in particular continuing to outperform.

#### Fund Review<sup>2</sup>

During the period under review, the Fund returned -1.07% on a NAV-to-NAV basis, underperforming the benchmark by 0.55%. Performance was driven primarily by security selection, as the Fund's selection of

<sup>1</sup> Source: Bloomberg and Manulife Investment Management, as of 30 June 2024. Global equities are represented by MSCI World Index.

<sup>2</sup> Based on Class A. The share class returned -6.02% on an offer-to-bid basis during the period. Since inception (14 September 2009), the share class returned 1.74% (annualised) on a NAV-to-NAV basis and 1.38% (annualised) on an offer-to-bid basis. Performance figures are calculated with all dividends and distributions reinvested, taking into account all charges which would have been payable upon such reinvestment. The benchmark is the Markit iBoxx ALBI Singapore Index.

SGD-denominated corporate bonds underperformed over the period relative to the benchmark. This was mostly offset by asset allocation, as the Fund continued to hold an overweight in SGD-denominated bonds over the period, which generated larger returns relative to the benchmark. Tighter credit spreads in the Fund's holdings of USD-denominated bonds also contributed positively to relative performance.

## **Outlook**

There will be some challenges for the global economy moving into the second half of the year, as the lagged effects of a tight monetary policy comes more into play. After a resilient first few months of the year, June finally saw the coming of a few softer economic data points that suggest a moderation of the resiliency of the US economy, as seen from the first months of the quarter. Divergence in central bank policies were more evident in June, with the European Central Bank (ECB) being the first of the major central banks to cut interest rates by 0.25%. Data dependency, however, remains a key theme across these major global central banks, which is likely to feed into continued volatility in markets for the time being. Some potential risks lingering in the background include further deterioration of global economic data as well as political considerations stemming from elections, particularly in Europe and the US later in the year. Although somewhat in the rear mirror for now, a re-acceleration in inflation is one of a few tail risks that might delay or even defer the easing cycle to a time later than expected. Against such a backdrop and where yields remain at elevated levels, potential opportunities remain for Asia fixed income from both an income and potential capital appreciation perspective as we feel these are likely key drivers of performance as markets look to the next monetary easing cycle.

The domestic economy in Singapore has been held up largely by a tight labour market, with domestic spending particularly on services providing lifts to overall growth this year. Labour markets domestically could see some loosening over the rest of the year, particularly if the growth outlook for the global economy deteriorates, which might continue to place pressure on the domestic economy. The MAS will meet two more times later in the year to revisit policy settings, and we feel the stickiness in core inflation prints will likely keep them holding onto their tight policy stance, barring any external shocks. That said, the bar for a tightening of their policy remains high and is not our base case going into their next meeting in July.

Credit spreads ended the first half broadly tighter, with the outperformance from the earlier months being offset by some weakness in June. Spreads still look to be on the richer end of the valuation scale relative to historical levels. As yields rallied late in the first half of the year, issuers took advantage of cheaper financing costs to issue debt in the primary markets, which put spreads under pressure given the rich valuations in the secondary markets. That said, many of these new deals were well subscribed with books multiple times covered, which suggests that investors still likely have cash to deploy. This is particularly pertinent to new deals that provide decent concessions and attractive valuations. The Chinese property sector fared resiliently over the quarter, with more support measures by local governments being announced. SGD-denominated bond spreads also showed some weakness later in the first half and particularly in June, with the rally in yields bringing out sellers of credits and amidst increased supply particularly in the financials space. We continue to expect issuers to be opportunistic in issuing new debt in the primary markets and if yields continue to trend lower, we expect further supply pressure. Although spreads have corrected from the tights, they could be further impacted given evolving risk factors from potential increasing supply and geopolitical events. We still maintain our bottom-up credit selection approach, particularly in primary market deals. That said, we remain tactical in our credit allocation and exposure, preferring to harvest gains where appropriate and to be proactive in managing the Fund's risk as we continuously evaluate the risk-reward profile of our holdings.

## As of 30 June 2024

### Manulife Singapore Equity Fund (the "Fund")

#### Market Review<sup>1</sup>

For the period under review, the Singapore equity market rallied with the MSCI Singapore Total Return Index around 12%, despite starting the year on a weak note for the first two months after a strong rally in December 2023. Despite disappointing economic data during the first quarter which continued to reveal weakness in market conditions, the market reversed its losses and ended the quarter marginally higher. Singapore's 2023 gross domestic product (GDP) growth came in at 1.1%, as the economy ended on a high note despite the challenging macro environment.

The Singapore equity market extended its rally into the second quarter, recording the highest level since February 2022. During a Monetary Authority of Singapore (MAS) review in April, MAS maintained the prevailing rate of appreciation of the Singapore dollar nominal effective exchange rate (S\$NEER) and kept the width and level of the band unchanged. This was the fourth hold, following 5 consecutive tightening moves since October 2021. Economic data were mixed during the quarter. 1Q24 GDP growth was 2.7% year-on-year (YoY) and both core and headline inflation remained relatively sticky at 3.1% YoY in the month of May. Non-oil domestic exports continued to fall during the quarter, at a much slower pace. Meanwhile in politics, Deputy Prime Minister Lawrence Wong was sworn in as Singapore's fourth Prime Minister on 15 May 2024.

With the commencement of Mainland China's 30-Day Visa Free Policy in February and the recovery in travel activity, tourist arrivals in the first half of 2024 grew 31% YoY to 8.24 million, on course to surpassing Singapore's 15-16.5 million full-year projection. The Ministry of Trade & Industry kept its 2024 GDP growth forecast at 1%-3%.

#### Fund Review

During the period under review, the Fund was competitive against the benchmark<sup>2</sup> on a NAV-to-NAV<sup>3</sup> basis. A key contributor to performance was our overweight position in an agricultural product company on positive industry fundamentals and strong earnings capabilities. On the other hand, our overweight position in an energy and urban development player, whose sell-off had been in line with the fall in the S&P Global Clean Energy Index, detracted from performance.

---

<sup>1</sup> Source: Bloomberg and Manulife Investment Management, as of 30 June 2024. The Singapore equity market is represented by MSCI Singapore Total Return Index.

<sup>2</sup> MSCI Singapore Total Return Index.

<sup>3</sup> The Fund returned 11.60% for Class A on a NAV-to-NAV basis and 6.02% on an offer-to-bid basis during the period. Since inception (14 September 2009), the class returned 3.26% (annualised) on a NAV-to-NAV basis and 2.90% (annualised) on an offer-to-bid basis. Performance figures are calculated with all dividends and distributions reinvested, taking into account all charges which would have been payable upon such reinvestment.

## Outlook<sup>4</sup>

Despite a solid first half of 2024, global economic growth appears to have slowed down as US GDP numbers were revised sharply downwards. Global equities, however, continued with the soft-landing narrative, with most major equity markets advancing for the month of June. Emerging markets (EM) and Asia equities outperformed developed markets (DM) equities for the month of June, and this was mainly on the back of technology strength in the Taiwan market and South Korea, with the tech sector rebounding strongly in recent months. Mainland China, on the other hand, retreated into the mid-year, as continued policy adjustments have been gradual and so far been insufficient to bolster domestic demand. Hence, the next Chinese Politburo meeting will be important and closely watched by investors for more clarity on policy directions. The Singapore equity market continued to do well in June, with the banking sector outperforming yet again on the back of more expectation of further pushouts of US Federal Reserve (Fed) interest rate cuts. We remain constructive on the Singapore equity market, given still cheap valuations and good yields, and a resilient domestic economy.

# Manager's Investment Report

## As of 30 June 2024

### Manulife Asia Pacific Investment Grade Bond Fund (the "Fund")

#### Market Review<sup>1</sup>

In the US, Treasury yields trended higher over the period as the market pared back interest rate cut expectations amid a continued hawkish stance by the US Federal Reserve (Fed) due to stickier-than-expected inflation data. The Fed kept its interest rate unchanged at 5.25% to 5.50% over the period. Dot plots after the June Federal Open Market Committee (FOMC) meeting indicated the possibility of having one cut by the end of 2024. On the economic front, the US first-quarter 2024 gross domestic product (GDP) increased by 1.4% (quarter-on-quarter, annualised). The personal consumption expenditure price index, the Fed's preferred measure of inflation, rose 2.6% year-on-year (YoY) in May, in line with estimates, while non-farm payrolls increased by 272,000 in the same month, above market estimates. Over the period, the 10-year US Treasury yield trended higher from 3.88% to 4.40%.

In Mainland China, data released over the period showed an economic acceleration. The Caixin Manufacturing Purchasing Managers' Index (PMI) ticked up to 51.7 in May from 51.4 in April, remaining in expansionary territory (above the 50 mark) and reaching its highest point since July 2022 on the back of expanded production. First-quarter GDP increased by 5.3% YoY, above estimates. Over the period, the People's Bank of China (PBoC) cut reserve ratio requirements (RRR) by 50 basis points (bps) to 10% and the 5-year loan prime rate by 25 bps to 3.95%, respectively. Towards the end of the period, Mainland China started issuing RMB 1 trillion worth of ultra-long special government bonds to support the budget. Mainland China's local government bond yields trended lower over the period. In India, government bond yields had a volatile path towards the end of the period in response to the general election result. Prime Minister Narendra Modi's party surprised the market by not winning a majority in the final election results. However, the market settled after cabinet appointments suggested policy continuity. In June, Indian sovereign bonds were officially added to J.P. Morgan's Government Bond Index-Emerging Markets (GBI-EM) suite. On the economic front, India's first-quarter GDP grew by 7.8%, above estimates, while inflation decelerated in May (4.75% YoY). India's local government bond yields trended lower over the period. In Indonesia, Bank Indonesia (BI) surprised the market and increased its key interest rate by 25 bps to 6.25% to support its currency in April. Inflation in April rose by 2.84% YoY, below estimates, while first-quarter GDP grew by 5.11%, above estimates. Towards the end of the period, there were fiscal concerns in the market as an article suggested President-elect Prabowo is planning to increase Indonesia's debt ratio to 50% of GDP from 39% over the next five years, which was then denied by Prabowo's team. Indonesia's local government bond yields rose over the period.

Asian investment grade (IG) credits posted positive returns over the period, largely driven by tighter credit spreads and positive carry. Credit spreads on the J.P. Morgan Asian Investment Grade Corporate Bond Index tightened by 32 bps; the index increased by 2.48% in US dollar terms. Asian IG tightened as trading technicals remained supportive amid positive headlines on rating actions and stable corporate earnings results. Towards the end of the period, Mainland China announced new measures to support the property sector. For example, a RMB 300-500 billion re-lending program was introduced to finance local state-owned enterprises (SOEs) purchasing completed but unsold properties, and mortgage rates for first homebuyers were lowered by 25 bps. The new issuance market picked up towards the end of the period amid lower US interest rates; primary activities were seen in Mainland China, South Korea, Philippines, Indonesia, and Australia.

---

<sup>1</sup> Source: Bloomberg and Manulife Investment Management, as of 30 June 2024. Asian IG credits are represented by J.P. Morgan Asian Investment Grade Corporate Bond Index.

The Singapore dollar weakened by 2.63% against the US dollar, while most of the major Asian currencies also weakened against the US dollar over the period. The Indian rupee was a regional performer amid the strengthening economic growth in the first quarter of 2024 and a narrowing current account deficit. In contrast, the Thai baht lagged amid deteriorating fundamentals and the government's numerous efforts to influence the Bank of Thailand.

## **Fund Review<sup>2</sup>**

The Fund's exposure to BBB-rated corporates in Mainland China and Indonesia was the main contributor to performance amid the strong credit rally over the period. In addition, the overall currency exposure also contributed. The underweight to the South Korean won and zero exposure to the Taiwanese dollar were notable contributors amid weakened currencies against the Singapore dollar. Furthermore, the Fund's active management on Chinese interest rate duration contributed positively, while the overweight to long-end US interest rate duration slightly detracted amid higher US interest rates.

Over the period, we actively managed our duration while remaining positive on selective Asian local bonds, for example in India and Philippines, as they offer attractive yields in our opinion. In addition, we added Chinese local rates at the beginning of the period amid expectations of easing monetary policy, while we tactically took profit and partially reduced the exposure over the period. Moreover, we also took profit and trimmed the USD-denominated bonds of selective Chinese property developers and Macau gaming operators, after a strong rally amid new supportive measures. Towards the end of the period, we rotated exposure into the defensive spaces, such as the USD-denominated bonds of a Hong Kong SAR financials company and a Taiwanese insurance company. On the currency front, we increased US dollar exposure against the Singapore dollar towards the end of the period.

## **Outlook**

We believe the Fed and other global central banks transitioning to end their interest rate hike cycles in 2024 would help underpin global and Asian bond markets. In the Asia ex-Mainland China region, we believe Asian central banks, such as India, South Korea and Philippines, have room to cut interest rates in 2024 amid a benign inflationary environment. At the National People's Congress, Chinese authorities kept their growth target at around 5%, inflation target at around 3%, and fiscal deficit target at 3% for 2024. Mainland China also started the issuance of RMB 1 trillion worth of ultra-long special government bonds to support the budget. We expect additional monetary policy easing and more targeted measures from authorities to support the Chinese economy. Furthermore, to see a sustained recovery of the Chinese property sector, we would monitor the effective implementation of the announced measures and market sales recovery.

---

<sup>2</sup> Based on Class A-MDis. The share class returned 1.68% on a NAV-to-NAV basis and -3.41% on an offer-to-bid basis during the period. Since inception (21 January 2014), the share class returned 2.33% (annualised) on a NAV-to-NAV basis and 1.83% (annualised) on an offer-to-bid basis. Performance figures are calculated with all dividends and distributions reinvested, taking into account all charges which would have been payable upon such reinvestment.

## As of 30 June 2024

### Manulife Global Asset Allocation – Growth Fund (the “Fund”)

#### Market Review<sup>1</sup>

The first half of 2024 saw positive returns across equity markets while fixed income markets were mixed, amid a higher-for-longer interest rate environment. Despite positive returns among major equity indices, broad market breadth and participation narrowed during the period, and considerably in Q2 with most gains concentrated in large-cap growth stocks bolstered by continued enthusiasm surrounding artificial intelligence (AI). Markets began the year with expectations for around six US Federal Reserve (Fed) interest rate cuts, with the first one occurring in March. However, throughout the period, these expectations have been further priced out and dwindled to three cuts by the year-end, given resilient US economic data and a pickup in inflation, though the Fed has only guided for one cut.

Q1 was a solid quarter for global equities, as stock prices were pushed higher by technology names amid AI enthusiasm despite the potential for a reduced magnitude of interest rate cut expectations. Market breadth improved as value stocks also gained traction near the end of the quarter. Fixed income was mixed, given the guidance for less interest rate cuts than previously expected amidst an environment of improving economic growth and slowing disinflation. In the US, positive equity gains were supported by strong corporate earnings, particularly from the “Magnificent Seven”. Economic data releases during the quarter indicated ongoing economic resilience with gross domestic product (GDP) growth revised up and a resilient US labour market, while US inflation ticked up modestly, prompting the Fed to keep interest rates unchanged. Elsewhere in Europe, euro-zone economic data improved over the quarter, with improving composite Purchasing Managers’ indices (PMI) and falling inflation data, which helped lift equities and the euro. The Swiss National Bank (SNB) surprised the market with a 25 basis points (bps) cut. Within Asia, Japanese equities had a strong rally with gains being boosted by increasing traction and interest from foreign investors amid solid corporate earnings announcements. The Bank of Japan (BoJ) ended its negative interest rate era for the first time in 17 years. Chinese equities struggled, given concerns over a sluggish property market, while the Taiwan market, India, and Philippines were positive.

The positive market momentum from Q1 extended into Q2, which was characterised by a concentrated market breadth with bifurcated returns among major equity indices, led by a handful of US large-cap growth names. In the US, equities continued to edge higher, driven by the technology and communication services sectors. Markets began the quarter with an aggressive pullback of interest rate cut expectations given a strong pickup in US economic data in April, which marked the first negative month in 1H 2024. However, throughout the quarter, uncertainty dissipated somewhat and optimism for a soft landing was back. Europe and the UK saw positive macro data points as growth prospects improved, alongside falling inflation. European equities fell in June amid heightened political uncertainty in France, following President Emmanuel Macron’s call for a snap election. The European Central Bank (ECB) delivered a 25 bps interest rate cut. Within Asia, Japanese equities weakened as the Japanese yen fell to a 38-year low. Chinese equities rebounded as investor sentiment improved, due to property market initiatives by the government and improving economic activity.

---

<sup>1</sup> Source: Bloomberg and Manulife Investment Management, as of 30 June 2024. “Magnificent Seven” refers to Alphabet, Amazon, Apple, Meta Platforms, Microsoft, NVIDIA and Tesla. Global equities are represented by MSCI AC World Index; Japanese equities by MSCI Japan Index; Chinese equities by MSCI China Index; Taiwanese equities by Taiwan Stock Exchange Weighted Index; Indian equities by S&P BSE Sensex Index; Philippines equities by Philippine Stock Exchange Index; US equities by S&P 500 Index; European equities by MSCI Europe Index; Asia Pacific ex-Japan equities by MSCI AC Asia ex Japan Index; Latin America equities by MSCI EM Latin America Index. The securities mentioned are for illustrative purpose only. The information neither indicates any actual portfolio holdings nor constitutes any investment recommendation or advice.

Over 1H 2024, the MSCI AC World Index gained 11.58%. Regionally, the US led the gains with the S&P 500 Index rising 15.29%, followed by Asia Pacific ex-Japan equities (up 8.63%) given strong performances in the Taiwan market and India. Latin America was the only market to fall into negative territory, down 15.48% as both Brazil and Mexico dragged it down.

Sector-wise, information technology stood at the forefront of the year-to-date (YTD) rankings, gaining 25.22%, followed by communication services (22.21%) driven by AI enthusiasm. The interest rate-sensitive real estate sector lagged and was the only sector with negative returns (down 3.39%), as higher-for-longer interest rates put pressure on the sector.

Fixed income markets ended 1H 2024 with mixed performances in the face of reduced magnitude of interest rate cut expectations. The FTSE World Government Bond Index fell 3.96% over the period, while the Bloomberg Global Aggregate Corporate Index fell 0.92%. Less interest rate-sensitive and riskier segments, like high yield bonds, fared well with the Bloomberg Global High Yield Index up 3.18% and the Bloomberg US High Yield Index up 2.58%.

In foreign exchange, most major currencies weakened against the US dollar over the period, including the Japanese yen (down 12.36%), Euro (down 2.98%), and British pound (down 0.84%).

## **Fund Review<sup>2</sup>**

Over the period under review, the Fund was positive, primarily driven by the equity allocation while the fixed income allocation detracted. The Fund ended the period with approximately 41% in equities, 53% in fixed income, 1% in commodities, and the rest in cash.

Within equities, North American equities were a notable portfolio contributor, as well as Japanese equities. Other allocations in European equities and Asia Pacific ex-Japan equities were positive contributors. Within fixed income, international bonds were the largest overall portfolio detractor, followed by US bonds. Emerging markets (EM) bonds slightly detracted, while Asian bonds were positive. The cash allocation also contributed slightly. The Fund remains on the lookout for opportunistic allocations to redeploy or trim risk, where appropriate.

## **Outlook**

Looking ahead, we expect lower interest rates to be accommodative for economic growth. In addition, inflation appears to be coming down and unemployment remains low. However, geopolitical challenges and the upcoming US presidential election could pose challenges to investor sentiment. We also expect that the first half of 2024 will be more challenging for global economic growth.

We believe we are at, or soon past peak interest rates and the global easing cycle has begun with global disinflation firmly in place. All major central banks have indicated that their next moves are cuts, provided inflation continues to moderate, except for the Bank of Japan (BoJ), which finally moved out of its negative interest rate policy. We still expect cuts to occur in most developed markets in 2024, even with inflation in the 2%-3% range, as markets reprice the reduced magnitude of cut expectations. The Federal Open Market Committee (FOMC) decision in March was to keep interest rates steady while continuing to keep three rate cuts on its dot-plot calendar this year. It has provided a source of comfort to markets, which have been braced for incrementally hawkish messaging. The balance of risks is now weighed towards a later start to the Fed's easing cycle, which would be able to adjust gently, given healthy growth, full employment, and

---

<sup>2</sup> Based on Class A-MDis SGD. The share class returned 5.06% on a NAV-to-NAV basis and -0.20% on an offer-to-bid basis during the period. Since inception (9 October 2014), the share class returned 1.53% (annualised) on a NAV-to-NAV basis and 1.00% (annualised) on an offer-to-bid basis. Performance figures are calculated with all dividends and distributions reinvested, taking into account all charges which would have been payable upon such reinvestment.

under-control inflation. Our base case is presently for cuts to begin in June. While recent data strongly suggests an extended cycle, we continue to caution for an economic slowdown around mid-year, once the full effect of past interest rate hikes have filtered through the system.

We maintain our medium-term view that US economic growth is the “cleanest dirty shirt” for now, as the US’s recession odds are lower than in other developed market economies and declining in light of the Fed’s telegraphed early pivot. We still have a low-to-medium recession conviction for Q2/Q3 and continue to emphasize weakness in non-US economic growth (Europe, Japan, and Canada) where recessions are more likely to happen. That said, whether or not economic activity has contracted to the extent that it fits the official definition of recession is much less important than the decline in growth momentum that lies ahead. In our view, lending, consumer activity, capital investment, and, among other things, earnings may weaken in the coming six months, although we are mindful that going into the US presidential election in November, it is likely fiscal support will remain strong to help the positive macro narrative. Given that outcome, the Fed would have to make the critical concession of cutting interest rates while inflation remains above their target. Markets could be particularly sensitive to any variance away from the soft-landing narrative. If we, however, observe that the data is too strong, we could see further pricing out of the Fed’s fund rate cuts.

In Asia, negative sentiment has been dominated by a faltering structural trend in aggregate growth in Mainland China, with particularly persistent tail risks in the property sector. In our view, easier monetary policy does not sufficiently stimulate lending. Incremental economic policy to stabilise the real estate sector and improve consumer and corporate sentiment will continue, but large-scale fiscal stimulus appears less likely. Consequently, we feel Mainland China will not be the main driver of global/regional manufacturing activity. We believe the lagged effects of incremental policy easing should generate some recovery in credit growth. Equity valuations in Asian markets tip toward the favourable side of the equation. To sustain the ongoing domestic stock market rally, we need to get more clarity on the Chinese government’s economic reforms, growth, and budget deficit targets. For the cyclical rebound to strengthen itself beyond the mechanical reopening boost, we would also need to see a sustained recovery in household consumption and property sales.

In markets, the potential end of the global interest rate hike cycle is supportive of our view of equities, but an uncertain macroeconomic landscape is a potential headwind. Corporate earnings have generally remained strong, and consumers have remained resilient for the most part. Given the uncertainty surrounding several factors—among them monetary policy, geopolitical tensions, and recessionary risks—we are focusing on quality across equity assets. At the same time, we appreciate the excitement surrounding AI and the magnitude of its potential impact on revenue monetisation, productivity and cost-cutting, and seek pockets of related growth opportunities. We believe the second half of 2024 should see a more favourable environment for equities, with corporate earnings strength broadening beyond large-cap technology names, while market support into the US presidential election in November should also help keep markets broadly buoyant.

Overall, we expect the market to experience some volatility in the first half of 2024, particularly as investors reprice interest rate and potentially inflation expectations. We maintain that there are downside risks to the global economy, given tighter credit conditions and may see higher interest rates for longer than expected, but may also not come off at the magnitude the market has priced in. Tactical positioning will be more prevalent again as we continue into 2024, to nimble add and de-risk portfolios, as well as add to yield opportunities as they arise.

# Manager's Investment Report

## As of 30 June 2024

### Manulife SGD Income Fund (the "Fund")

#### Market Review<sup>1</sup>

The first half of 2024 saw further volatility in markets as investors recalibrated their expectations for the path of monetary policy amidst a global economy that has held up better than expected over the first half of the year, as well as elevated geopolitical tensions and a mixed inflationary environment. Central banks broadly continued to emphasize data dependency, with officials mostly maintaining their steadfast stances on tight policy rates. The backdrop for risk assets remained strong, with resilient economic data providing support and lending further credibility to the soft-landing narrative. Both US Treasury and SGD-denominated sovereign yields repriced higher in the first half of the year from the end of last year, across steeper curves.

The US Federal Reserve (Fed) made no changes to its fed funds rate, leaving it in the range of 5.25% to 5.50% over the first half of the year. Fed Chairman Jerome Powell indicated numerous times that it would be appropriate for them to "begin dialing back policy restraint at some point this year", but also reiterated that the Fed is unlikely to begin easing policy until they are confident that inflation is trending "sustainably towards 2.0%". In their latest June meeting, the Fed continued to maintain their data dependency stance, preferring to wait for further data validating the decelerating trend of inflation. The Federal Open Market Committee's (FOMC) interest rate projection, however, showed a reduction in the median number of cuts this year to just one, complicating the outlook for interest rates.

Singapore's economy remained largely resilient over the first half, with first quarter gross domestic product (GDP) figures painting a rosier picture with growth at 2.7% on a year-on-year basis. There were still lingering worries, particularly in the externally oriented sectors, as international trade continued on its sluggish path. The latest non-oil domestic exports (NODX) growth for May 2024 was still in contractionary territory, printing -0.1% year-on-year, extending the broad trade weakness since the start of the year. Core inflation in Singapore remained sticky, with the latest May 2024 figure at 3.1% year-on-year. The preceding months also saw similar prints, as sticky services inflation, supported by a tight labour market, domestically kept this figure elevated over the first half of the year. The Monetary Authority of Singapore (MAS) still expects core inflation to remain elevated for the most part of 2024 but to see a slowdown in the last quarter and into 2025, with current inflation on track with their forecast.

SGD-denominated and Asian USD-denominated credit spreads ended the period tighter yet again, as risk assets were supported by the continuation of resilient economic data and with investors still having cash to deploy across the region. The geopolitical tensions and uncertainties in the first half of the year largely did not meaningfully impact the prevailing positive sentiment over risk assets. Further concrete measures announced by the Chinese government to aid the economy also lent some support to the Goldilocks theme. Global equities were also higher across the period, with the larger cap growth stocks in particular continuing to outperform.

## Fund Review<sup>2</sup>

During the period under review, the Fund's performance was positive on a NAV-to-NAV basis. This was driven by the Fund's allocation to both USD and SGD-denominated bonds and tighter credit spreads in these bonds over the period. The Fund's bond carry also contributed positively to total returns. This was partially offset by the negative mark-to-market returns due to a broadly rising interest rate environment.

## Outlook

There will be some challenges for the global economy moving into the second half of the year, as the lagged effects of a tight monetary policy comes more into play. After a resilient first few months of the year, June finally saw the coming of a few softer economic data points that suggest a moderation of the resiliency of the US economy, as seen from the first months of the quarter. Divergence in central bank policies were more evident in June, with the European Central Bank (ECB) being the first of the major central banks to cut interest rates by 0.25%. Data dependency, however, remains a key theme across these major global central banks, which is likely to feed into continued volatility in markets for the time being. Some potential risks lingering in the background include further deterioration of global economic data as well as political considerations stemming from elections, particularly in Europe and the US later in the year. Although somewhat in the rear mirror for now, a re-acceleration in inflation is one of a few tail risks that might delay or even defer the easing cycle to a time later than expected. Against such a backdrop and where yields remain at elevated levels, potential opportunities remain for Asia fixed income from both an income and potential capital appreciation perspective as we feel these are likely key drivers of performance as markets look to the next monetary easing cycle.

The domestic economy in Singapore has been held up largely by a tight labour market, with domestic spending particularly on services providing lifts to overall growth this year. Labour markets domestically could see some loosening over the rest of the year, particularly if the growth outlook for the global economy deteriorates, which might continue to place pressure on the domestic economy. The MAS will meet two more times later in the year to revisit policy settings, and we feel the stickiness in core inflation prints will likely keep them holding onto their tight policy stance, barring any external shocks. That said, the bar for a tightening of their policy remains high and is not our base case going into their next meeting in July.

Credit spreads ended the first half broadly tighter, with the outperformance from the earlier months being offset by some weakness in June. Spreads still look to be on the richer end of the valuation scale relative to historical levels. As yields rallied late in the first half of the year, issuers took advantage of cheaper financing costs to issue debt in the primary markets, which put spreads under pressure given the rich valuations in the secondary markets. That said, many of these new deals were well subscribed with books multiple times covered, which suggests that investors still likely have cash to deploy. This is particularly pertinent to new deals that provide decent concessions and attractive valuations. The Chinese property sector fared resiliently over the quarter, with more support measures by local governments being announced. SGD-denominated bond spreads also showed some weakness later in the first half and particularly in June, with the rally in yields bringing out sellers of credits and amidst increased supply particularly in the financials space. We continue to expect issuers to be opportunistic in issuing new debt in the primary markets and if yields continue to trend lower, we expect further supply pressure. Although spreads have corrected from the tightness, they could be further impacted given evolving risk factors from potential increasing supply and geopolitical events. We still maintain our bottom-up credit selection approach, particularly in primary market deals. That said, we remain tactical in our credit allocation and exposure, preferring to harvest gains where appropriate and to be proactive in managing the Fund's risk as we continuously evaluate the risk-reward profile of our holdings.

---

<sup>2</sup> Based on Class A-QDis SGD. The share class returned 1.88% on a NAV-to-NAV basis and -1.17% on an offer-to-bid basis during the period. Since inception (18 November 2016), the share class returned 0.70% (annualised) on a NAV-to-NAV basis and 0.30% (annualised) on an offer-to-bid basis. Performance figures are calculated with all dividends and distributions reinvested, taking into account all charges which would have been payable upon such reinvestment.

## **Report to Unitholders**

### **For the financial period ended 30 June 2024**

#### **4 Global exposure to Financial Derivatives**

The global exposure to financial derivatives is computed using the commitment approach which is calculated as the sum of;

- a) the absolute value of the exposure of each individual financial derivative not involved in netting or hedging arrangements;
- b) the absolute value of the net exposure of each individual financial derivative after netting or hedging arrangements; and
- c) the sum of the values of cash collateral received pursuant to:
  - (i) the reduction of exposure to counterparties of over-the-counter (“OTC”) financial derivatives; and
  - (ii) efficient portfolio management (“EPM”) techniques relating to securities lending and repurchase transactions, and that are reinvested.

#### **5 Collateral**

The Funds do not have any collateral holding as at 30 June 2024.

#### **6 Securities Lending or Repurchase Transactions**

The Funds do not have any securities lending arrangements or repurchase transactions as at 30 June 2024.

#### **7 Investment in other unit trusts, mutual funds and collective investment schemes**

##### **Manulife Singapore Bond Fund**

Expense ratio is calculated in accordance with Investment Management Association of Singapore (“IMAS”) Guidelines for the Disclosure of Expense Ratios. The expense ratio does not include (where applicable) brokerage and other transaction costs, foreign exchange gains/losses, front or include back end loads arising from the purchase or sale of other funds and tax deducted at source arising out of income received. The Funds do not pay any performance fees.

## Report to Unitholders

### For the financial period ended 30 June 2024

#### 13 Turnover ratio

	30/06/2024 %	30/06/2023 %
Manulife Singapore Bond Fund	34.73	20.00
Manulife Singapore Equity Fund	25.07	22.84
Manulife Asia Pacific Investment Grade Bond Fund	0.40	23.58
Manulife Global Asset Allocation — Growth Fund	86.69	59.61
Manulife SGD Income Fund	28.55	15.66

The turnover ratio states the number of times per year that a dollar of assets is reinvested, as defined in accordance with the Code on Collective Investment Schemes issued by the Monetary Authority of Singapore. It is calculated based on the lesser of purchases or sales for the 12 months preceding the reporting date expressed as percentage of the daily average net asset value.

#### 14 Other material information

There is no other material information that will adversely impact the valuation of the Funds.

#### 15 Soft dollar commission /arrangement

The Manager does not receive any soft dollar commission or enter into any soft dollar arrangement in the management of the Funds.
